

1. Set the level of the finished shower floor surface and mark it on the wall in the area where the channel will be fitted (allow for the slope of the shower surface).

5. Glue the rest of the floor with normal vinyl floor adhesive.

2. Connect the channel to the drainage system and set the height using the adjustable legs.

6. Roll out the vinyl flooring. Remember to install a vinyl floor at least 100mm on the wall surface. Carefully cut a hole along the inside edge of the VF clamp drain (use heat gun to soften the vinyl).

3. Fill the space under and around the channel with screed or a similar product to the level of the flange. Create a fall to the vinyl drain from all four sides.

7. Lock the vinyl floor by placing the Vinyl clamp lock in the drain area. Tighten the provided screws to secure the floor.

4. Use Superfix glue to seal surface around the drain. Superfix is a silyl modified polymer (SMP) based adhesive with a high tensile strength. Use a glue gun to better distribute the substance.

7. Lay the grating on the push-in frame.

Warranty terms and conditions

1. The warranty is the manufacturers, namely Wiper sp. z o.o. company, pledge to repair free of charge physical defects of the product. The warranty period, 25 years, is counted from the date of purchase indicated on the invoice or receipt.
