

## Under-floor shower plates

### WIPER SHOWERBASE PREMIUM

The product consists of an XPS plate with a glued sealing mat, shower channel with a cover (optional drain inlet) and a suitable McAlpine drain trap.

The primary advantages associated with application of the WIPER SHOWERLAY prefabricated plates include:

- one hundred per cent, double waterproofing (both the surface layer and the XPS plate)
- shaped slope towards the drain channel (or point drain inlet)
- excellent adhesion of glue to the surface layer of the plate
- hardness of the surface layer allows to cement even very small mosaics
- high acoustic insulation
- increased mat size in relation to the plate enabling good sealing with walls and floors

- plate thickness 20mm or 30mm (specify in the order)
- after installation, the plates should be supported over the entire surface
- other sizes and drain layouts made to order

In order to specify the order, please provide the following information:

1. thickness of the tray (20 or 30mm)
2. tray type (LINE - with a channel, POINT - with a point drain)
3. tray dimensions: X, Y
4. drain position: X1, Y1

If no drain position is specified, assumed for channels is  $X1 = Y1 = 150\text{mm}$  while for point drains – central location.
